Ednovate Labs

How the platform works, in pictures.

A learner chooses a course, does the work, and a tutor checks it. An employer only sees the skills a person has signed. This guide follows one learner from the first question to a job.

Learners and families | Tutors | Employers | Programme partners

THE WHOLE PATH

Follow Awa, from a question to a job.

Awa Sanneh lives in Kanifing. She wants work that uses numbers, and she does not know which course to start. Every screen in the demo is a step on this line.

1. **Career Compass asks five questions**
   What she enjoys, where she is starting, how she learns best, how much time she really has, and what would make it worth it.

2. **She gets a course, and she can say no**
   The suggestion is Data Analytics Foundations, onsite at the Kanifing lab. Awa chooses. The guide does not enrol her.

3. **She learns by doing a real task**
   A module ends when she can do the thing — clean a messy list, write a query, explain a chart — not when the weeks run out.

4. **Her tutor reads the work and signs the skill**
   Fatoumatta Jallow checks what Awa submits. She can sign it, or send it back with a note. A computer never signs a skill.

5. **An employer sees the signed skills, and the reason**
   A match says why it was made, and which skill is still missing. Work that is still with the tutor stays hidden.

One record, not a new certificate every course. The Skills Passport keeps growing. A later course adds to it. It does not wipe the page clean.

WHO IT IS FOR

Two doors. The same record behind both.

A learner and a tutor never look at the same screen, but they are looking at the same piece of work.

AS

Awa Sanneh

Learner · Kanifing · Data, Sept 2026

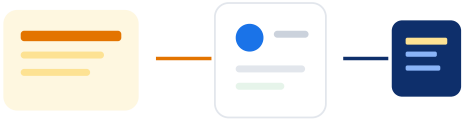

- Answer five questions and get a suggested first course.
- Learn in a lab, live with a tutor, or on her own hours.
- Hand in the work, with the file attached.
- Share a link that shows only signed skills.

FJ

Fatoumatta Jallow

Lead tutor · Ednovate Lab, Kanifing

- See the whole cohort, and who needs a conversation.
- Read the work in a queue. Edit the feedback. Then send it.
- See which skills the region has, and which jobs are open.

Nothing is awarded for turning up. Attendance is not the record. The record is a skill Fatoumatta has agreed Awa can do.

STEP 1 · CAREER COMPASS

Five questions. A suggestion. Her decision.

The compass is a short conversation, about four minutes. It narrows the choice. It does not make it.

Compass

What excites you about tech?

Working with data

Compass

How do you learn best?

Onsite, with classmates

Compass

How much time can you really give each week?

5 to 10 hours

Suggested start

Data Analytics Foundations

Onsite, at the Ednovate Lab in Kanifing. Twelve weeks. A tutor in the room.

Awa can pick a different course, or a different way to learn. The suggestion stays on the page so she can come back to it.

1	2	3	4	5
What excites you?	Where are you starting from?	How do you learn best?	How much time do you really have?	What would make this worth it?

STEP 2 · LEARNING STUDIO

The same course, three ways to take it.

Awa picks the way that fits her week. She can switch later. The skills at the end are the same.

Onsite

In a lab, with a tutor and classmates. Kanifing, Banjul, Serrekunda and Janjanbureh.

Live, with a tutor

Classes at a set time, joined from home. A person is teaching. It is not a recording.

At her own pace

She moves through it in the hours she actually has. Around a job, or around school.

Finished means she can do it.

Each module ends with a piece of work that goes into the passport. Sitting through the class is not enough, and it is not the thing an employer is shown.

STEP 3 · SKILLS PASSPORT

A record of what she can do, not where she sat.

Awa's passport travels with her from course to course. She can add her photo and attach the real file — a spreadsheet, a memo, a notebook.

Awa Sanneh Data · Sept 2026 · Kanifing	ENL-GM-2026-04182
Data profiling	Signed
Data cleaning	Signed
SQL querying	Signed
Dashboard design	With the tutor
Data storytelling	Not started

What Awa sees

Everything. Signed skills, work still being checked, and skills she has not started. She can see who signed each one, and when.

What an employer sees

Only the signed skills. The link she shares hides anything still in review. There is a button that shows this view, so she can check it herself.

Data profiling · Data cleaning · SQL · ~~Dashboard~~

THE MOMENT THAT MATTERS

A person signs the skill. The screen does not.

Awa writes what she did and what she decided, and attaches the file. Then it leaves her hands.

1. **Awa sends the work**
   A title a reviewer would recognise, a few sentences on what she found, and the file itself.

2. **It waits in Fatoumatta’s queue**
   The tutor sees the task, the file, and a draft note she is free to rewrite. The draft is a starting point, not the decision.

She signs it
The skill turns green on the passport. Awa’s name, the tutor’s name, and the date stay on it. Employers can now see that line.

or

She sends it back
Awa gets a note on what to fix. The skill stays off the public record until the work is signed. Nothing is quietly approved.

Within two working days. That is the promise on the submission screen. The queue on the tutor’s home page shows how many pieces of work are still waiting.

STEP 4 · TALENT BRIDGE

A job match that says why.

Employers look for signed skills, not the name of a certificate. Every match explains itself in a sentence Awa can read.

Example role in the demo

Junior Data Analyst

Banjul · Hybrid · a data team

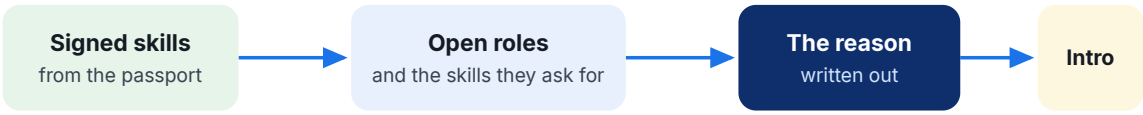

SQL querying | Data cleaning | Dashboard design

3 of 4 skills they ask for are already signed

The reason, in plain words

Three of the skills this role screens on are already signed in Awa's passport. Dashboard design is still with her tutor, so the match says so instead of hiding it.

She can ask for an introduction. The stage of that conversation — introduced, interviewing, offer — stays on the same page.

THE TUTOR'S MORNING

Three screens. Then the picture feeds back.

Fatoumatta does not start from a spreadsheet she maintains herself. The morning is the same three stops, in this order.

01

The roster

Every learner, the course, how far they are, and a plain flag: on track, worth a conversation, or at risk.

→

02

The queue

Work waiting to be read. She checks it against the task, rewrites the note if she wants, then signs or returns it.

→

03

The region

Signed skills set against open roles, country by country across ECOWAS. No learner's name is on this page.

The loop closes

What the region is short of becomes the next course to open. The passport is not the end of the story.

Learn
A course matched to the person, and to a gap.

→

Prove
A tutor signs the skill, or sends it back.

→

Hire
An employer sees the proof and the reason.

→

Teach the gap
The region shows what to run next.

An example, so the picture is easy to read. The Gambia might have many people who can clean data, and few jobs asking for it. A neighbour might have the jobs and not the people. That is the chart. It is counts, not names.

TRY THE DEMO

Open it and click. Nothing here is a real record.

The people, courses, tutors and salaries are examples, so you can look around freely. Sign in is already filled in. Press Log in.

I’m a learner

Start with Career Compass. Answer the five questions and see the course it suggests.

Name	`student`
Password	`student2026`

I’m a tutor

Open the evidence queue and sign or return a piece of work. Then look at the region.

Name	`educator`
Password	`educator2026`

A good first ten minutes

1. **As Awa, answer the compass**
   Notice that you can disagree with the suggestion.
2. **Open the passport and switch to the employer view**
   The skills still with the tutor disappear. That is what a shared link shows.
3. **Switch to the tutor and open the queue**
   Read one piece of work. Sign it, or send it back. The learner’s passport changes.

Labs in the demo: Kanifing, Banjul, Serrekunda, Janjanbureh. Reset demo data, in the side menu, puts everything back.
